

MODULAR WORKSPACE PODS

OVERVIEW

The Storacall Workspace pods have been designed to provide quieter, more private working spaces, in open plan offices or public areas. Available in office, industrial and outside formats, the modular design and flexible size of the units also facilitates separate working areas to isolate activities and keep people separated.

Manufactured using high quality anodised aluminium modular extrusions, the structure can easily be configured to order and later extended if required.

You can choose the size of space required and the type of panels, glass, roof and doors to suit your requirements. Many extras are available and Wall panels are customisable from a range of colours and materials. Acoustic panels, clear panels, translucent panels, textured panels or a combination of panels, are all easily fitted, to order.

Just let us know what you'd like

HIGHLIGHTS
